

# MIDGET LOUVER

800-643-4381

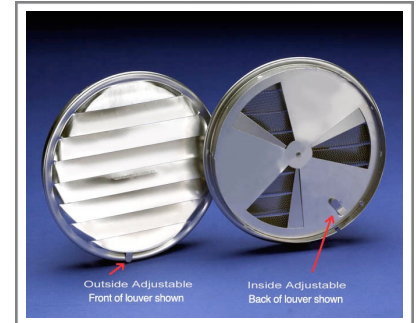

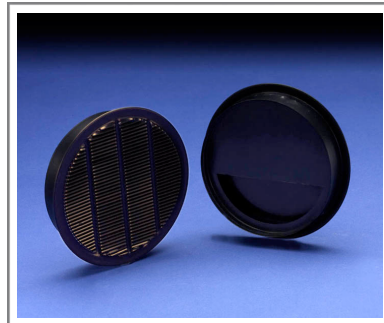

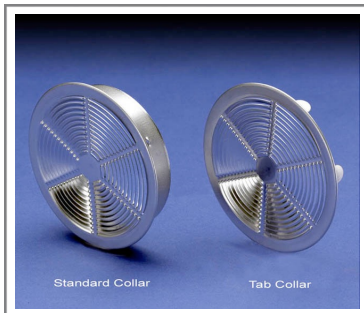

Since 1948

Useful where there is no direct contact with rain or other water sources, this louver features a screen only. Interior applications include basement walls, closets, bathrooms, kitchens, and boats. Can also be used effectively in the wide overhangs of houses and in soffits.

The RLS Series Louvers are especially adaptable to a wide range of industrial, manufacturing, and building construction uses. The gridded face which is tooled and die-stamped for superior strength and durability serves a dual purpose as a water deflector and an insect shield.

This is the original all purpose louver designed for indoor/outdoor use. The louver includes a water deflector and screen, making it ideal for situations where insects and rain are a problem

The SWL Louver can be used for interior uses, such as basement walls, closets, cabinets, electronic equipments

Designed for use in the darkrooms and in other areas where light control is a factor. Darkroom louvers are made of fine quality black anodized aluminum with the RLS die-stamped gridded shield to keep out rain or foreign objects. The louvers are easy to install in both old and new construction.

This is an adjustable vent control added. They are available in two versions: the ARIC Series is designed with inside vent control. The AROC Series is designed with outside vent control. Perfect in situations where heat loss is a factor, these louvers can be used at the end of round heating ducts, in houses in areas subject to severe storms and in laundry rooms.
